

Print Formatting FAQs

Print Formatting FAQs

1.) I imported print from the __future__ module, now print isn't working. What happened?

This is because once you import from the __future__ module in Python 2.7, a print statement will no longer work, and print must then use a print() function. Meaning that you must use

print('Whatever you were going to print')

or if you are using some formatting:

print('This is a string with an {p}'.format(p='insert'))

The __future__ module allows you to use Python3 functionality in a Python2 environment, but some functionality is overwritten
